

Grade reports

As with other functionality on Totara, you can use [reports](#) to gain insight into Learners' grades, or see an overview of your own grades if you are a Learner.

Trainers and Editing Trainers can use the [grader report](#) to see a summary of all of their Learners' grades in a given course. You can use this report to view aggregated grades or a more detailed view, edit individual grades, or change how grades are calculated. Alternatively, you can view a specific learner's grades across the site using the [grade overview report](#). While Learners can view their own grades using this report, Trainers can view the site-wide grades for the learners enrolled on their courses.

You can also use [single view reports](#) to view all grade results for individual Learners or items in the gradebook.

Finally, you can see all of the actions taken relating to grades in a certain course using the [grade history report](#). You can either view actions taken by each Trainer, for each grade item, or for each learner. For example, you might want to view all changes made to a certain learner's grades in order to see why their overall grade had changed.
