

Ventura theme

The Ventura theme is the recommended [theme](#) for customising the appearance of your site in Totara 13 onwards. You can configure the Ventura theme by navigating to *Quick-access menu > Appearance > Themes > Ventura*.

Site theme

With the Ventura theme selected you can configure the following settings.

Setting	Description	Notes
Brand		
Logo	Upload an image to be used as your site's logo in the main navigation.	-
Alternative text	Add the name of the site to function as a text alternative to the logo image. This is recommended to make your site more accessible.	-
Favicon	Here you can upload a small icon which will display in the browser tab next to the page name. The favicon allows users to see which site is open in the tab at a glance.	The favicon image should be 16 x 16 px and in the .ico format.
Colour		
Primary colour	Use the colour picker or enter a hex code for the colour you want to use for the interactive elements of your site, e.g. hyperlinks and buttons.	-
Use overriding colours	If you want to configure the colour of interactive elements in more detail you can enable this setting. With Use overriding colours enabled you can set the following colours individually: <ul style="list-style-type: none"> • Primary button colour: Select the fill colour of buttons • Secondary button colour: Select the outline and text colour of buttons • Link colour: Select the colour of all hyperlinks on your site 	-
Accent colour	Set the colour of non-interactive elements such as the tab highlight line and card outlines.	-
Header background colour	Set the background colour of the main navigation bar at the top of the page.	This setting can be accessed by expanding the More colours section.
Header text colour	Set the text colour on the main navigation bar at the top of the page.	This setting can be accessed by expanding the More colours section.
Page text colour	Set the colour of text on the site.	This setting can be accessed by expanding the More colours section.
Footer background colour	Set the background colour of the site footer.	This setting can be accessed by expanding the More colours section.
Footer text colour	Set the colour of text in the site footer.	This setting can be accessed by expanding the More colours section.
Images		
Core: Display login page image	Enable this setting to display an image of your choice on your site's login page. You will need to upload an image for the Login page setting.	-
Core: Login page	Upload an image to display on your site's login page. The Display login page image setting must be enabled.	-
Core: Logo alternative text	Add a text alternative that conveys the content and function of the login image. If the image is purely presentational, leave this field empty.	-
Learn: Course	Upload an image to change the default course image.	Note that this will only affect your site if you are using courses in Totara Learn.
Learn: Program	Upload an image to change the default program image.	Note that this will only affect your site if you are using programs in Totara Learn.
Learn: Certification	Upload an image to change the default certification image.	Note that this will only affect your site if you are using certifications in Totara Learn.

Engage: Resource	Upload an image to change the default resource image.	Note that this will only affect your site if you are using resources in Totara Engage.
Engage: Workspace	Upload an image to change the default workspace image.	Note that this will only affect your site if you are using workspaces in Totara Engage.
Custom styles		
Custom CSS	Here you can enter CSS code to override the styles for specific site components.	Any CSS added here will be applied after all other styles.
Custom footer	Enter text to display in the site footer when this theme is used.	Text added to the footer is centre-aligned by default. You can also add HTML code to this section to customise the footer.

Tenant themes

If you have [multitenancy](#) enabled on your site and have multiple tenants set up, you can choose to use the default site theme or create specific themes for each tenant.

To configure the default look and feel of the site click **Edit site brand**.

In the **Tenant branding** table you can see a list of all of the tenants on your site, along with their unique **Tenant identifier**. The **Branding** column indicates whether each tenant is using the default **Site** branding or its own **Custom** branding. To edit a tenant's theme, click the edit icon () in the **Actions** column.

When **Custom tenant branding** is enabled for a tenant, changes to the site branding will no longer be applied to the tenant. When custom branding is first enabled for a specific tenant the current site settings will be used as default for that tenant. If custom tenant branding is enabled, later disabled, and even enabled again, the tenant branding used will be the same as it would have been without disabling and re-enabling it, regardless of whether any changes were made to the site settings since enabling it the first time.

By default, each tenant will use the **Site** branding, but enabling the **Custom tenant branding** setting allows you to configure the following settings:

Setting	Description	Notes
Brand		
Logo	Upload an image to be used as the tenant's logo in the main navigation.	-
Logo alternative text	Add the name of the site to function as a text alternative to the logo image. This is recommended to make your site more accessible.	-
Favicon	Here you can upload a small icon which will display in the browser tab next to the page name. The favicon allows users to see which site is open in the tab at a glance.	The favicon image should be 16 x 16 px and in the .ico format.
Colour		
Primary colour	Use the colour picker or enter a hex code for the colour you want to use for any interactive elements within the tenant, e.g. hyperlinks and buttons.	-
Use overriding colours	If you want to configure the colour of interactive elements in more detail you can enable this setting. With Use overriding colours enabled you can set the following colours individually: <ul style="list-style-type: none"> • Primary button colour: Select the fill colour of buttons • Secondary button colour: Select the outline and text colour of buttons • Link colour: Select the colour of all hyperlinks within the tenant 	-
Accent colour	Set the colour of non-interactive elements such as the tab highlight line and card outlines.	-
Header background colour	Set the background colour of the main navigation bar at the top of the page.	This setting can be accessed by expanding the More colours section.
Header text colour	Set the text colour on the main navigation bar at the top of the page.	This setting can be accessed by expanding the More colours section.
Page text colour	Set the colour of text on the site.	This setting can be accessed by expanding the More colours section.
Footer background colour	Set the background colour of the site footer.	This setting can be accessed by expanding the More colours section.

Footer text colour	Set the colour of text in the site footer.	This setting can be accessed by expanding the More colours section.
Images		
Display login page image	Enable this setting to display an image of your choice on your site's login page. You will need to upload an image for the Login page setting.	Note that this setting will only be available if you have enabled the Enable pre-login tenant themes setting (<i>Quick-access menu > Tenants > Settings</i>).
Login page	Upload an image to display on your site's login page. The Display login page image setting must be enabled.	Note that this setting will only be available if you have enabled the Enable pre-login tenant themes setting (<i>Quick-access menu > Tenants > Settings</i>).
Login alternative text	Add a text alternative that conveys the content and function of the login image. If the image is purely presentational, leave this field empty.	Note that this setting will only be available if you have enabled the Enable pre-login tenant themes setting (<i>Quick-access menu > Tenants > Settings</i>).
Custom		
Custom footer	Enter text to display in the site footer when this theme is used.	Text added to the footer is centre-aligned by default. You can also add HTML code to this section to customise the footer.
