

# Report graph block

The **Report graph** block shows a graph for a selected report on your site.

## Configuring Report graph block

In addition to the standard or [Common block settings](#), there are a number of configurable options specific to the **Report graph** block.

Setting	Description	Notes
<b>Report</b>	Select the report you want to display from the dropdown list.	-
<b>Show report data for user</b>	Determine which data is used for the graph. There are three options: <ul style="list-style-type: none"><li>• <b>Me (username)</b>: Displays report data for the user creating the block</li><li>• <b>Current user viewing block</b>: Displays report data for the user viewing the block</li><li>• <b>The guest account</b>: Displays report data for the guest account viewing the block</li></ul>	-
<b>Cache lifetime</b>	Select the duration of the cache lifetime, ranging from one minute to one day. This determines how often the graph is updated.	This setting should be set to ensure that graph information is adequately up to date, while keeping page load times fast.
<b>Max height</b>	Specify the maximum height (in pixels) of the graph image.	By default the image will take up the available space, and the aspect ratio will always be maintained.
<b>Max width</b>	Specify the maximum width (in pixels) of the graph image.	By default the image will take up the available space, and the aspect ratio will always be maintained.
