

Likes and comments

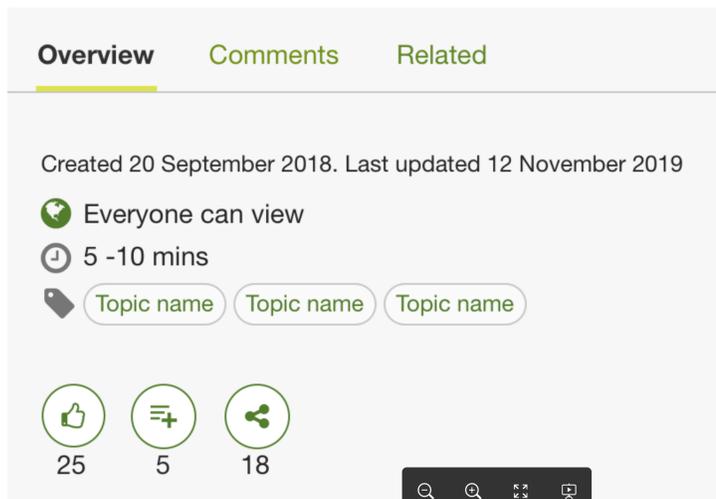

Liking content

As with many social media platforms, users are able to 'like' content on Totara Engage, signifying that they enjoy, appreciate or find the content interesting. Users can like:

- Resources
- Discussion threads
- Comments (and their replies) on resources and playlists

Users can like a resource or comment by clicking the like button (👍), or unlike it by clicking the button again.

As users like content the like counter increases. Clicking the like counter (👍₂₅) will display a list of users who have liked the content in a pop-up window. The number of likes a resource or comment has received will be displayed in several places, such as the resource overview shown below. Additionally, the number of likes is shown on the resource card in the **Library** or in a playlist.

Commenting

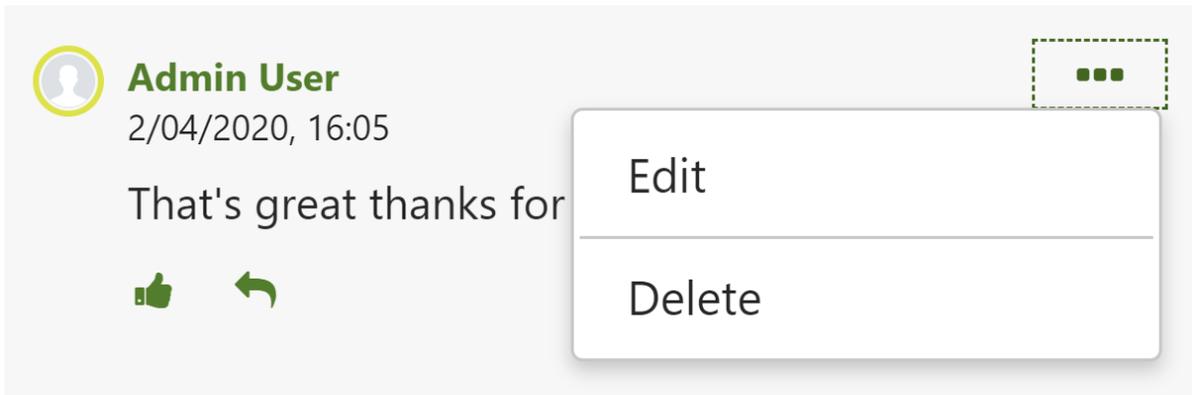

Users can view the comments on a resource or playlist by navigating to the **Comments** tab in the side bar. Comments are displayed in a nested format with replies to other comments indented, making larger comment threads easier to read. Comments will include the commenter's name and profile picture, as well as a timestamp indicating when the comment was added.

The screenshot shows a user profile for 'Admin User' with the email 'admin@example.com'. The profile has two tabs: 'Overview' and 'Comments', with 'Comments' being the active tab. Below the tabs, there is a section titled 'Comments (1)'. A single comment is displayed, also from 'Admin User', dated '2/04/2020, 16:05'. The comment text is 'That's great thanks for that!'. Below the comment are two icons: a thumbs-up (like) and a curved arrow (reply). A vertical scrollbar is visible on the right side of the profile view.

To add a comment on a resource or playlist, simply type in the comment section and click **Post** while on the **Comments** tab.

The screenshot shows the comment input form. It features a text input field with the placeholder text 'Enter a comment'. To the left of the input field is a small circular profile icon. To the right of the input field is a grey button labeled 'Post'.

Alternatively users can reply to other comments by clicking the reply icon () for the comment they want to reply to. By default replies to top-level comments will be hidden, but the number of replies is indicated next to the reply icon. Clicking **View replies** under a comment will reveal the replies to the selected comment.

The screenshot shows a comment interface. On the left, there is a user profile icon, the name "Admin User" in green, and the timestamp "2/04/2020, 16:05". Below this is the comment text "That's great thanks for" and two icons: a thumbs-up and a reply arrow. On the right side of the comment, there is a three-dot menu icon enclosed in a dashed green box. A white dropdown menu is open, showing "Edit" and "Delete" options separated by a horizontal line.

Users can also edit or delete their comments by clicking the icon of three dots on the comment. Additionally, Site Administrators (or other users with the appropriate privileges) can edit or delete other users' comments. When editing a comment users need to click **Done** to save the changes to the comment, or **Cancel** to undo their changes. When deleting a comment, users will need to select **Confirm** when prompted. Note that when a comment is deleted the replies will still be displayed.

If users leave inappropriate comments then other users can [report these comments](#) to be reviewed and potentially removed by a Site Administrator.
